The cod fishing grounds are mostly in the northern Pacific, and with lots stamped "Dictated but not read" the inshore and the outer banks might be large. The papers would say | "form by far the largest group of cod banks in the world." One great advantage the Pacific fisherman has over his Atlantic brother is that he does not lose time because of the enemies of the cod driving them off the banks, as is the case in the East, where vessels are sometimes tied up

for weeks on account of dog fish.

Again, there is no scarcity of bait to

werry the Pacific cod fisherman. The product of the Pacific cod fish eries was about 39,000,000 pounds with a value at home ports of more than half a million dollars. A mar ket for the products has been found in the West Indies, Australia, Hawaii Mexico and Asia. The opening of the Panama Canal has helped the Pacific fishermen, and they are planning an expansion of their trade to South and Central America, even to Europe and our Atlantic and Gulf coasts. New England controlled the market for cod throughout the United States and also the export trade, and did not welcome the intrusion of the Pacific cod. While the Eastern fish dealers were unable to prevent the loss of the "greater part of their trade on the Pacific coast, they fought

hard for the rest": "Dealers and consumers were told in some instances that the fish prepared by this coast's curers were not cod, or that they were a very inferior grade of That these misstatements had a wide dissemination and made a considerable impression is evidenced even to this day different sections of the country against
